Research Interests

Macroeconomics, Monetary Economics, International Finance

Education

PhD in Economics 2027 (Expected)
University of Calgary, Calgary, Canada

MA in Economics 2017
University of South Carolina, Columbia, USA

MSc in Economics 2010
Jahangirnagar University, Dhaka, Bangladesh

BSc in Economics 2009
Jahangirnagar University, Dhaka, Bangladesh

Research Experience

Research Assistant Jan 2022 – Apr 2022
For Dr. Apostolos Serletis, University of Calgary, Calgary, Canada

Joint Director (Research) Jan 2019 – Aug 2021
Research Department, Central Bank of Bangladesh, Dhaka, Bangladesh

Deputy Director (Research) Dec 2015 – Dec 2018
Research Department, Central Bank of Bangladesh, Dhaka, Bangladesh

Assistant Director (Research) Sep 2012 – Nov 2015
Research Department, Central Bank of Bangladesh, Dhaka, Bangladesh

Research Associate May 2012 – Aug 2012
Centre for Policy Dialogue (CPD), Dhaka, Bangladesh

Teaching Experience

Sessional Instructor Fall 2023, Summers 2023–2026
Department of Economics, University of Calgary

- ECON 341: Money and Banking

Teaching Assistant Sep 2021 – Present
Department of Economics, University of Calgary

- ECON 203: Principles of Macroeconomics
- ECON 209: Engineering Economics
- ECON 301: Intermediate Economic Theory – Microeconomics I
- ECON 303: Intermediate Economics Theory – Macroeconomics I
- ECON 373: Game Theory and Strategic Thinking for the Social Sciences
- ECON 403: Public Sector Economics: Taxation
- ECON 493: Empirical Energy Economics
- ECON 541: Monetary Theory
- ECON 559: Advanced Macroeconomics

- ECON 659: Macroeconomic Theory
- ECON 709: Advanced Macroeconomic Theory I
- ECON 759: Advanced Macroeconomic Theory II
- POLI 399: Quantitative Research Methods

Adjunct Faculty Jun 2018 – Aug 2021
Department of Economics, Jahangirnagar University, Bangladesh

- ECON 406: Money, Financial Institutions, and Capital Market

Teaching Assistant Aug 2016 – Apr 2017
Department of Economics, University of South Carolina

- ECON 322: Intermediate Macroeconomics

Work in Progress

Stochastic Trends, Economic Fluctuations, and Classical Money Demand Functions: The Evidence from the Different Types of Money of money (JMP)

Abstract:
This paper examines whether empirical support for the monetary extension of the balanced-growth framework depends on how money is measured. I study long-run relationships among real output, consumption, investment, real money balances, and the user cost of money using simple-sum, original Divisia, credit-augmented Divisia, and credit-augmented Divisia inside monetary aggregates. Each aggregate is paired with its corresponding aggregate-specific user cost to maintain consistency with aggregation theory. Using U.S. quarterly data through 2026:q2, I apply the Johansen maximum likelihood procedure and test the long-run restrictions implied by balanced-growth theory. The results provide weak support for the balanced-growth restrictions at different sample lengths subject to availability. In the common sample, none of the simple-sum or original Divisia measures supports the money demand restriction in the three-variable system, while only Divisia M4 aggregate supports it in the five-variable system. By contrast, credit-augmented Divisia measures provide more frequent support for the money demand restriction, particularly in the five-variable system. The consumption-output and investment-output restrictions remain unsupported. These findings show that improved monetary measurement can strengthen empirical support for the theoretical money demand relationship without establishing the full set of balanced-growth restrictions.
